Research laboratory presentation

A position is available at Université de Montréal and the Research Center of the Sainte-Justine Hospital University Center in Montréal, QC, Canada. The laboratory is seeking a candidate to contribute in cutting edge research in the field of radio-oncology and MRI, in particular in patient with brain and peripheral nervous system tumors. Topics of study specifically focus on volumetric analysis of tumors. Candidates with background in biomedical, electrical, computer engineering, as well as basic sciences including computer sciences, mathematics and physics are preferred. Experience with MRI is encouraged.

Research project description

This project provides an excellent opportunity for the candidate to work within a multidisciplinary research team including scientists and clinicians from radiology, neurology and oncology. Pediatric patients include in this project are recruited as part as a multicenter clinical trial with targeted therapy (trametinib) (ClinicalTrials.gov Identifier: NCT03363217). A total of 45 patients on a total of 150 have already been recruited. The candidate will be encouraged to prepare and submit scholarship proposals to funding organizations and to lead publications. The candidate will participate in designing innovative methods related to the processing of MRI images.

Required training and profile

- MSc and/or BSc degree(s) in biomedical or electrical engineering, physics, mathematics, computer sciences or a closely related field
- Experience in research; ability to carry out research experiments and projects
- Candidates with experience in the areas of medical imaging such as MRI, CT or PET are strongly encouraged to apply
- Programming experience in computer programming languages (e.g. Matlab, Python, and others) required
- Strong written and oral communication skills in French and English required
- Works independently and participates productively as a team player
- Highly motivated, ability to identify potential problems and develop solutions

Conditions of internship

The candidate will be registered through an academic program in Biomedical Engineering at University de Montréal and will have an appointment at Sainte-Justine HUC and access to laboratories and technological platforms.

Studies at the CHU Sainte-Justine Research Center

Pursue your [graduate or postdoctoral studies](#) at the **CHU Sainte-Justine Research Center**, and be one of the 500 students, fellows and interns involved in accelerating the development of knowledge in the field of maternal, child and adolescent health, whether in basic or clinical research. Under the supervision of prominent scientists, especially in leukemia, rare pediatric diseases, genetics, perinatology, obesity, neuropsychology and cognition, scoliosis and rehabilitation, you will have the opportunity to work with multidisciplinary scientific teams and collaborators from all over the world.

About the CHU Sainte-Justine Research Center

CHU Sainte-Justine Research Center is a leading mother-child research institution affiliated with Université de Montréal. It brings together more than 200 research investigators, including over 90 clinician-scientists, as well as 500 graduate and postgraduate students focused on finding innovative prevention means, faster and less invasive treatments, as well as personalized approaches to medicine. The Center is part of CHU Sainte-Justine, which is the largest mother-child center in Canada and the second most important pediatric center in North America. More on research.chusj.org
